# SUSTAINABLE DEVELOPMENT GOALS

17 GOALS TO TRANSFORM OUR WORLD

Co-created by local leaders and our locally hired employees, the economic and social development programs designed to alleviate poverty and impact over 100,000 community members.

Our organic greenhouse distributes seedlings to the community for reforestation and community gardens. Carbon revenue also funds water access and sustainable farming training.

Regional hospital labs have been renovated and equipped with updated technology. The project increases resources for community educators and NGOs to conduct health workshops including menstrual hygiene and sex education.

As of 2022, over 26,000 students have received scholarships totaling over \$1.2 million dollars.

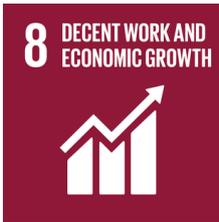

30% of our workforce is female, many of whom are managers and rangers, roles typically reserved for men in the region. We conduct company-wide anti-harassment training and have a strong equity and diversity policy.

Carbon revenues have funded the completion of over 50 water projects that improve access to clean water for over 100,000 people.

Our sustainable charcoal team has produced tens of thousands of kgs of eco-charcoal without cutting down a single tree and are developing sales channels to increase its distribution. Eight permanent staff manually process 850-1,274 0.5kg briquettes/week.

We have 300+ locally hired employees, making us 2nd largest job provider in the county.

A classroom was converted into a computer lab to provide internet access to rural students. Road improvements were funded in the project area and support micro loan programs.

Wildlife Works REDD+ projects in developing nations provide funding for sustainable livelihoods and development programs to give agency to marginalized forest communities.

The Wildlife Works eco factory trains and employs over 70 local community members to produce apparel and accessories for sustainable brands worldwide.

The Kasigau REDD+ project reduces over 3 million tons of carbon dioxide emissions annually.

The Kasigau REDD+ project protects over 200,000 hectares of dryland forest, thousands of threatened elephants and 14 other IUCN endangered species.

Wildlife Works co-creates projects with land owners and forest communities within the existing culture to implement inclusive self-governance structures. We operate with full transparency and zero tolerance for corruption.

Wildlife Works projects are examples of private-public-community partnerships that bring together national and regional government, local community and private sector to bring in conservation finance and community development.
